

16th August

For each DB I have retrieved the top 5 journals in each cluster. Cross-analyzing them I saw that the clusters are a different thing from the fields. Ask Nees how to do like they did on WoS. If there is a paper to cite further.

New journals from WoS

analyzing WoS I've found other journals from the digital humanities clusters. I'm creating a new list of journals in order to validate them.

The list is available at <https://bit.ly/2YULlbc>.

Crossref

Modify the resolution parameter because only 2 clusters over 94 are significant (more than 50 publications)

It was only a reference issue. The map had different ids. working on this.

Dimensions

The map visualization is not ok. I am trying to run the Leiden algorithm again with normalized parameters.

Running Leiden algorithm with normalization
